Detecting outliers

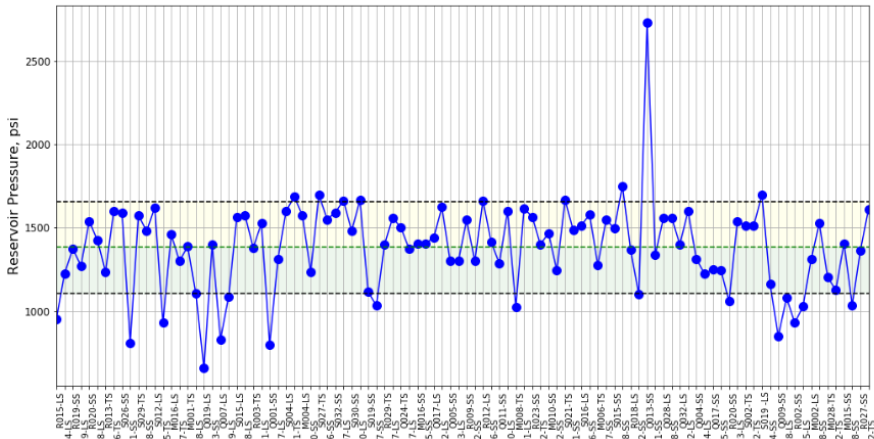

Detecting outliers

1. What are outliers
2. Should we delete outliers?
3. Methods for detecting outliers
4. Can you detect outliers with one well?

Example of outliers: RES_PRS, SD=1

```
## Using class method to plot Reservoir Pressure
```

```
{python}  
ds.plot_one_var_upper_lower('WT_RESPRES_On', 'Reservoir Pressure, psi', 'blue', nsd=1)
```

Example of outliers: RES_PRS, SD=3

```
python}  
plot_one_var_upper_lower('WT_RESPRES_On', 'Reservoir Pressure, psi', 'blue', nsd=3)
```
